

Extracting and Visualizing Stock Data

Description

Extracting essential data from a dataset and displaying it is a necessary part of data science; therefore individuals can make correct decisions based on the data. In this assignment, you will extract some stock data, you will then display this data in a graph.

Table of Contents

- Define a Function that Makes a Graph
- Question 1: Use yfinance to Extract Stock Data
- Question 2: Use Webscraping to Extract Tesla Revenue Data
- Question 3: Use yfinance to Extract Stock Data
- Question 4: Use Webscraping to Extract GME Revenue Data
- Question 5: Plot Tesla Stock Graph
- Question 6: Plot GameStop Stock Graph

Estimated Time Needed: **30 min**

In [57]:

```
# !pip install yfinance
# #!pip install pandas
# #!pip install requests
# !pip install bs4
# #!pip install plotly
```

In [58]:

```
import yfinance as yf
import pandas as pd
import requests
from bs4 import BeautifulSoup
import plotly.graph_objects as go
from plotly.subplots import make_subplots
```

Define Graphing Function

In this section, we define the function `make_graph`. You don't have to know how the function works, you should only care about the inputs. It takes a dataframe with stock data (dataframe must contain Date and Close columns), a dataframe with revenue data (dataframe must contain Date and Revenue columns), and the name of the stock.

In [59]:

```
def make_graph(stock_data, revenue_data, stock):
    fig = make_subplots(rows=2, cols=1, shared_xaxes=True, subplot_titles=("Historical Share Price", "Historical Revenue"), vertical_spacing = .3)
    fig.add_trace(go.Scatter(x=pd.to_datetime(stock_data.Date, infer_datetime_format=True), y=stock_data.Close.astype("float"), name="Share Price"), row=1, col=1)
    fig.add_trace(go.Scatter(x=pd.to_datetime(revenue_data.Date, infer_datetime_format=True), y=revenue_data.Revenue.astype("float"), name="Revenue"), row=2, col=1)
    fig.update_xaxes(title_text="Date", row=1, col=1)
    fig.update_xaxes(title_text="Date", row=2, col=1)
    fig.update_yaxes(title_text="Price ($US)", row=1, col=1)
    fig.update_yaxes(title_text="Revenue ($US Millions)", row=2, col=1)
    fig.update_layout(showlegend=False,
                      height=900,
                      title=stock,
                      xaxis_rangeflider_visible=True)
    fig.show()
```

Question 1: Use yfinance to Extract Stock Data

Using the `Ticker` function enter the ticker symbol of the stock we want to extract data on to create a ticker object. The stock is Tesla and its ticker symbol is `TSLA`.

In [22]:

```
TSLA = yf.Ticker("TSLA")
```

Using the ticker object and the function `history` extract stock information and save it in a dataframe named `tesla_data`. Set the `period` parameter to `max` so we get information for the maximum amount of time.

In [41]:

```
tesla_data = pd.DataFrame(TSLA.history(period="max"))
```

Reset the index using the `reset_index(inplace=True)` function on the `tesla_data` DataFrame and display the first five rows of the `tesla_data` dataframe using the `head` function. Take a screenshot of the results and code from the beginning of Question 1 to the results below.

In [26]:

```
tesla_data.reset_index(inplace=True)
tesla_data.head(5)
```

Out[26]:

	Date	Open	High	Low	Close	Volume	Dividends	Stock Splits
0	2010-06-29	3.800	5.000	3.508	4.778	93831500	0	0.0
1	2010-06-30	5.158	6.084	4.660	4.766	85935500	0	0.0
2	2010-07-01	5.000	5.184	4.054	4.392	41094000	0	0.0
3	2010-07-02	4.600	4.620	3.742	3.840	25699000	0	0.0
4	2010-07-06	4.000	4.000	3.166	3.222	34334500	0	0.0

Question 2: Use Webscraping to Extract Tesla Revenue Data

Use the `requests` library to download the webpage

<https://www.macrotrends.net/stocks/charts/TSLA/tesla/revenue>

(<https://www.macrotrends.net/stocks/charts/TSLA/tesla/revenue>). Save the text of the response as a variable named `html_data`.

In [7]:

```
html_data = requests.get('https://www.macrotrends.net/stocks/charts/TSLA/tesla/revenue',
allow_redirects=True).text
```

Parse the html data using `beautiful_soup`.

In [45]:

```
beautiful_soup = BeautifulSoup(html_data, 'html.parser')
```

Using beautiful soup extract the table with `Tesla Quarterly Revenue` and store it into a dataframe named `tesla_revenue`. The dataframe should have columns `Date` and `Revenue`. Make sure the comma and dollar sign is removed from the `Revenue` column.

In [46]:

```

text = 'Tesla Quarterly Revenue'

tesla_revenue = pd.DataFrame(columns=["Date", "Revenue"])

for table in beautiful_soup.find_all('table', attrs={'class': 'historical_data_table table'}):
    if table.find('th').getText().startswith("Tesla Quarterly Revenue"):
        for row in table.find_all("tr"):
            col = row.find_all("td")
            if len(col) == 2:
                date = col[0].text
                revenue = col[1].text.replace('$', '').replace(',', '')
                tesla_revenue = tesla_revenue.append({'Date':date, 'Revenue':revenue},
ignore_index=True)

```

[Click here if you need help removing the dollar sign and comma](#)

Remove the rows in the dataframe that are empty strings or are NaN in the Revenue column. Print the entire tesla_revenue DataFrame to see if you have any.

In [47]:

```

#### get the index of empty row
tesla_revenue.dropna(inplace=True)
i = tesla_revenue['Revenue'].loc[lambda x: x==''].index
tesla_revenue = tesla_revenue.drop(i)
tesla_revenue.dropna(inplace=True)

```

[Click here if you need help removing the Nan or empty strings](#)

Display the last 5 row of the tesla_revenue dataframe using the tail function. Take a screenshot of the results.

In [34]:

```
tesla_revenue.tail(5)
```

Out[34]:

	Date	Revenue
42	2010-09-30	31
43	2010-06-30	28
44	2010-03-31	21
46	2009-09-30	46
47	2009-06-30	27

Question 3: Use yfinance to Extract Stock Data

Using the `Ticker` function enter the ticker symbol of the stock we want to extract data on to create a ticker object. The stock is GameStop and its ticker symbol is `GME` .

In [12]:

```
GME = yf.Ticker("GME")
```

Using the ticker object and the function `history` extract stock information and save it in a dataframe named `gme_data` . Set the `period` parameter to `max` so we get information for the maximum amount of time.

In [42]:

```
gme_data = GME.history(period="max")
```

Reset the index using the `reset_index(inplace=True)` function on the `gme_data` DataFrame and display the first five rows of the `gme_data` dataframe using the `head` function. Take a screenshot of the results and code from the beginning of Question 3 to the results below.

In [43]:

```
gme_data.reset_index(inplace=True)
gme_data.head(5)
```

Out[43]:

	Date	Open	High	Low	Close	Volume	Dividends	Stock Splits
0	2002-02-13	6.480513	6.773399	6.413183	6.766666	19054000	0.0	0.0
1	2002-02-14	6.850831	6.864296	6.682506	6.733003	2755400	0.0	0.0
2	2002-02-15	6.733001	6.749833	6.632006	6.699336	2097400	0.0	0.0
3	2002-02-19	6.665671	6.665671	6.312189	6.430017	1852600	0.0	0.0
4	2002-02-20	6.463681	6.648838	6.413183	6.648838	1723200	0.0	0.0

Question 4: Use Webscraping to Extract GME Revenue Data

Use the `requests` library to download the webpage

<https://www.macrotrends.net/stocks/charts/GME/gamestop/revenue>

(<https://www.macrotrends.net/stocks/charts/GME/gamestop/revenue>). Save the text of the response as a variable named `html_data` .

In [15]:

```
url = 'https://www.macrotrends.net/stocks/charts/GME/gamestop/revenue'
html_data = requests.get(url, allow_redirects=True).text
```

Parse the html data using `beautiful_soup` .

In [16]:

```
beautiful_soup = BeautifulSoup(html_data, 'html.parser')
```

Using beautiful soup extract the table with GameStop Quarterly Revenue and store it into a dataframe named gme_revenue . The dataframe should have columns Date and Revenue . Make sure the comma and dollar sign is removed from the Revenue column using a method similar to what you did in Question 2.

In [50]:

```
text = 'GameStop Quarterly Revenue'
gme_revenue = pd.DataFrame(columns=["Date", "Revenue"])
for table in beautiful_soup.find_all('table', attrs={'class': 'historical_data_table table'}):
    if table.find('th').getText().startswith("GameStop Quarterly Revenue"):
        for row in table.find_all("tr"):
            col = row.find_all("td")
            if len(col) == 2:
                date = col[0].text
                revenue = col[1].text.replace('$', '').replace(',', '')
                gme_revenue = gme_revenue.append({'Date':date, 'Revenue':revenue}, ignore_index=True)
```

Display the last five rows of the gme_revenue dataframe using the tail function. Take a screenshot of the results.

In [51]:

```
gme_revenue.tail(5)
```

Out[51]:

	Date	Revenue
61	2006-01-31	1667
62	2005-10-31	534
63	2005-07-31	416
64	2005-04-30	475
65	2005-01-31	709

Question 5: Plot Tesla Stock Graph

Use the make_graph function to graph the Tesla Stock Data, also provide a title for the graph. The structure to call the make_graph function is make_graph(tesla_data, tesla_revenue, 'Tesla')

In [54]:

```
import pandas as pd
import requests
from bs4 import BeautifulSoup
import plotly.graph_objects as go
from plotly.subplots import make_subplots
import yfinance as yf
import pandas as pd

def make_graph(stock_data, revenue_data, stock):
    fig = make_subplots(rows=2, cols=1, shared_xaxes=True, subplot_titles=("Historical Share Price", "Historical Revenue"), vertical_spacing = .3)
    fig.add_trace(go.Scatter(x=pd.to_datetime(stock_data.Date, infer_datetime_format=True), y=stock_data.Close.astype("float"), name="Share Price"), row=1, col=1)
    fig.add_trace(go.Scatter(x=pd.to_datetime(revenue_data.Date, infer_datetime_format=True), y=revenue_data.Revenue.astype("float"), name="Revenue"), row=2, col=1)
    fig.update_xaxes(title_text="Date", row=1, col=1)
    fig.update_xaxes(title_text="Date", row=2, col=1)
    fig.update_yaxes(title_text="Price ($US)", row=1, col=1)
    fig.update_yaxes(title_text="Revenue ($US Millions)", row=2, col=1)
    fig.update_layout(showlegend=False,
                      height=900,
                      title=stock,
                      xaxis_rangeslider_visible=True)
    fig.show()

##
TSLA = yf.Ticker("TSLA")
tesla_data = pd.DataFrame(TSLA.history(period="max"))
tesla_data.reset_index(inplace=True)
tesla_data.head(5)
##

html_data = requests.get('https://www.macrotrends.net/stocks/charts/TSLA/tesla/revenue', allow_redirects=True).text
beautiful_soup = BeautifulSoup(html_data, 'html.parser')
text = 'Tesla Quarterly Revenue'
tesla_revenue = pd.DataFrame(columns=["Date", "Revenue"])

for table in beautiful_soup.find_all('table', attrs={'class': 'historical_data_table table'}):
    if table.find('th').getText().startswith("Tesla Quarterly Revenue"):
        for row in table.find_all("tr"):
            col = row.find_all("td")
            if len(col) == 2:
                date = col[0].text
                revenue = col[1].text.replace('$', '').replace(',', '')
                tesla_revenue = tesla_revenue.append({'Date':date, 'Revenue':revenue}, ignore_index=True)

i = tesla_revenue['Revenue'].loc[lambda x: x==''].index
tesla_revenue = tesla_revenue.drop(i)
tesla_revenue.tail(5)
```

```
# print(tesla_revenue.tail(5))
```

```
make_graph(tesla_data,tesla_revenue,'Tesla')
```

Question 6: Plot GameStop Stock Graph

Use the `make_graph` function to graph the GameStop Stock Data, also provide a title for the graph. The structure to call the `make_graph` function is `make_graph(gme_data, gme_revenue, 'GameStop')` .

In [55]:

```
import pandas as pd
import requests
from bs4 import BeautifulSoup
import plotly.graph_objects as go
from plotly.subplots import make_subplots
import yfinance as yf
import pandas as pd

def make_graph(stock_data, revenue_data, stock):
    fig = make_subplots(rows=2, cols=1, shared_xaxes=True, subplot_titles=("Historical Share Price", "Historical Revenue"), vertical_spacing = .3)
    fig.add_trace(go.Scatter(x=pd.to_datetime(stock_data.Date, infer_datetime_format=True), y=stock_data.Close.astype("float"), name="Share Price"), row=1, col=1)
    fig.add_trace(go.Scatter(x=pd.to_datetime(revenue_data.Date, infer_datetime_format=True), y=revenue_data.Revenue.astype("float"), name="Revenue"), row=2, col=1)
    fig.update_xaxes(title_text="Date", row=1, col=1)
    fig.update_xaxes(title_text="Date", row=2, col=1)
    fig.update_yaxes(title_text="Price ($US)", row=1, col=1)
    fig.update_yaxes(title_text="Revenue ($US Millions)", row=2, col=1)
    fig.update_layout(showlegend=False,
height=900,
title=stock,
xaxis_rangeflider_visible=True)
fig.show()

GME = yf.Ticker("GME")
gme_data = pd.DataFrame(GME.history(period="max"))
gme_data.reset_index(inplace=True)
gme_data.head(5)

html_data = requests.get('https://www.macrotrends.net/stocks/charts/GME/gamestop/revenue', allow_redirects=True).text
beautiful_soup = BeautifulSoup(html_data, 'html.parser')
text = 'GameStop Quarterly Revenue'
gme_revenue = pd.DataFrame(columns=["Date", "Revenue"])

for table in beautiful_soup.find_all('table', attrs={'class': 'historical_data_table table'}):
    if table.find('th').getText().startswith("GameStop Quarterly Revenue"):
        for row in table.find_all("tr"):
            col = row.find_all("td")
            if len(col) == 2:
                date = col[0].text
                revenue = col[1].text.replace('$', '').replace(',', '')
                gme_revenue = gme_revenue.append({'Date':date, 'Revenue':revenue}, ignore_index=True)

i = gme_revenue['Revenue'].loc[lambda x: x==''].index
gme_revenue = gme_revenue.drop(i)
```

```
gme_revenue.tail(5)  
  
# print(gme_revenue.tail(5))  
  
make_graph(gme_data,gme_revenue,'GameStop')
```
